

Google Drive to OneDrive Migration Guide

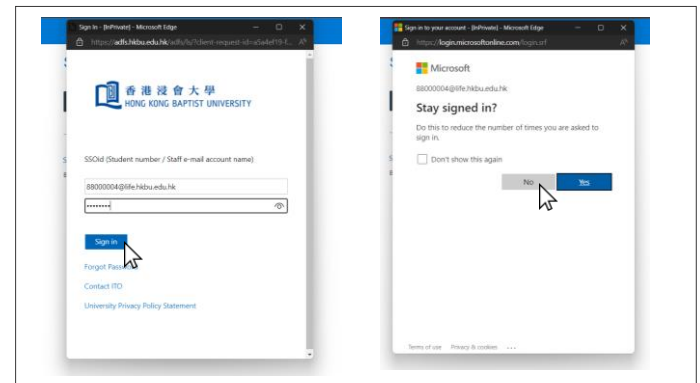

1 If you are using Google Backup and Sync on your computer, please disable the sync feature with your Google Drive.

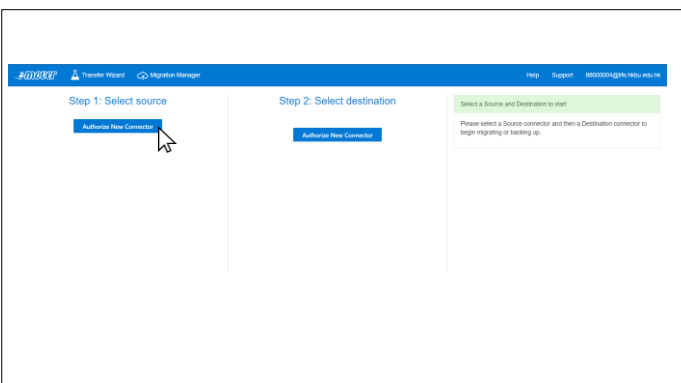

2 Go to Microsoft mover (<http://mover.io/index.html>) and click 'Login to Mover'.

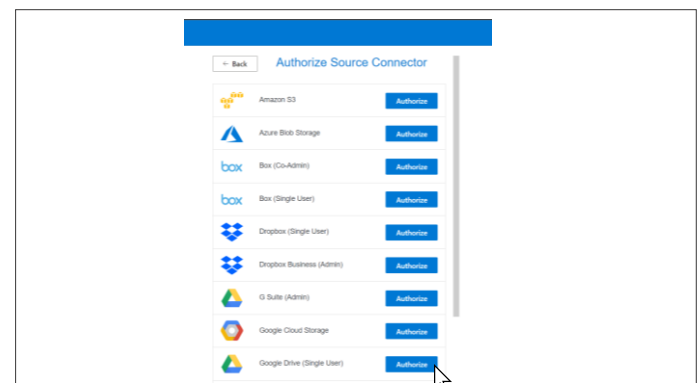

3 Please click 'Sign-in with Microsoft' with SSOid. Then click 'Next'.

4 Enter the SSOid with password and click 'Sign in'. Then select 'No'.

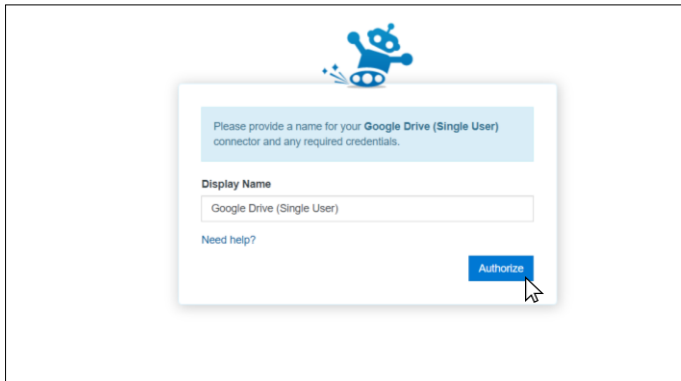

5 When you logged in the Mover, under Step 1: Select source, click 'Authorize New Connector'.

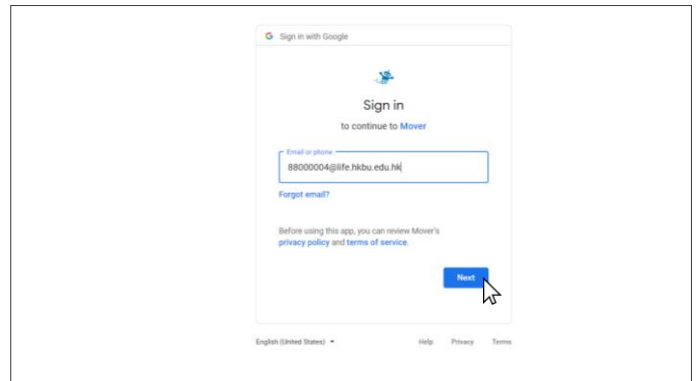

6 Select Google Drive (Single User) and then click 'Authorize'.

7 Click 'Authorize' again.

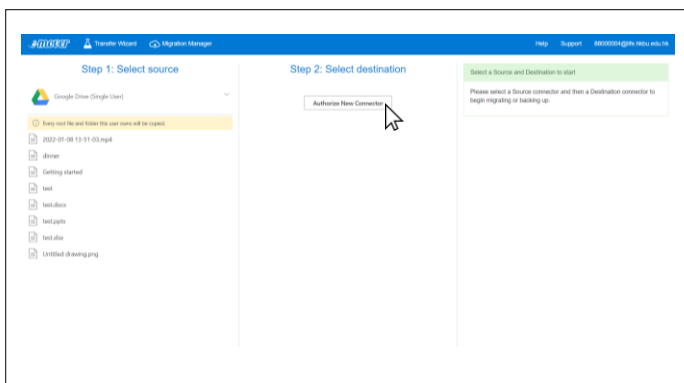

8 Enter your email address, then click 'Next'.

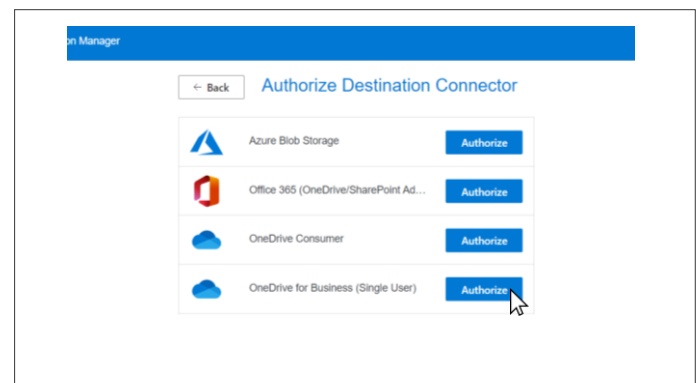

9 For security reasons you will be prompted to confirm your identity via 2FA. Follow the on-screen instructions to proceed.

10 Click 'Allow'.

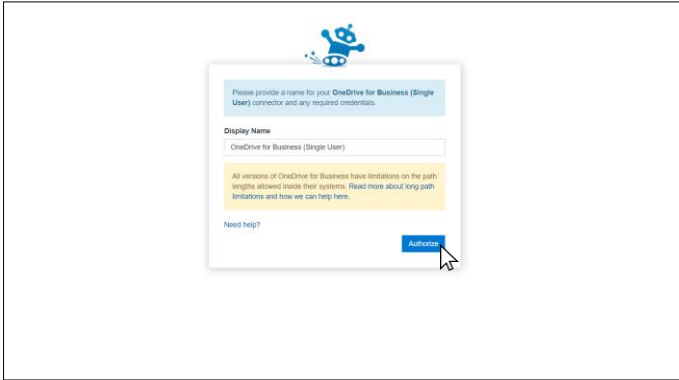

11 Under Step 2: Select destination, click 'Authorize New Connector'.

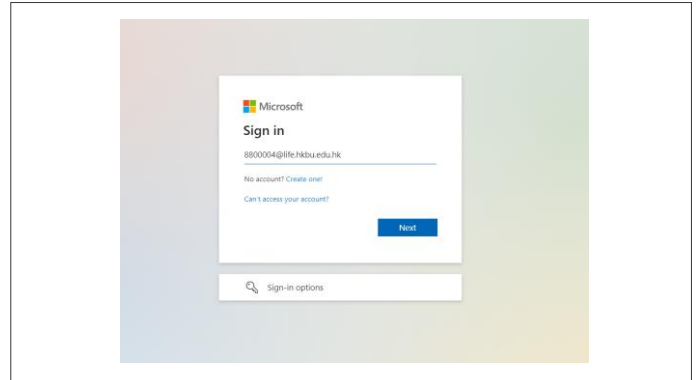

12 Select OneDrive for Business (Single User) and then click 'Authorize'.

13 Click 'Authorize' again.

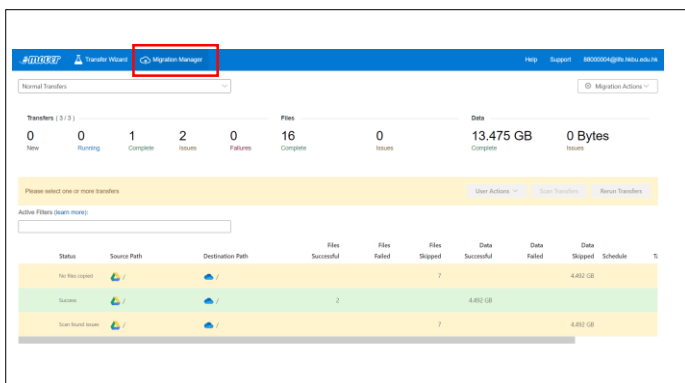

14 Sign in by the email address and click 'Next'.

15 For security reasons you will be prompted to confirm your identity via 2FA. Follow the on-screen instructions to proceed.

16 Create folder for imported files (e.g. 'Mover_20220511') in the destination. Select this folder then click 'Start copy'.

17 Data migration will start. You may turn off the PC. You may login again and click 'Migration Manager' to check whether the files are migrated successfully.
